## AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application.

## Listing of Claims

1. (Currently Amended) A medal keeping and paying system comprising:

at least one medal keeping and paying server apparatus, the medal keeping and

paying server apparatus comprising,

medal keeping means for counting and keeping at least one input medal,

medal paying means for paying the at least one medal if a payment signal is

input,

right person information inputting means for inputting right person peculiar

information for identifying a right person such as physical information to

authenticate the right person,

operation information storing means for storing at least count information

associated with at least the medal keeping means,

right person information storing means in which the right person peculiar

information for identifying the right person such as the physical information to

authenticate the right person is stored,

a memory for temporarily keeping information which is being processed

such as the count information of the medal keeping means, and

a processing section which

authenticates a right person from the right person peculiar

information input from the right person information inputting means and the right

person peculiar information stored in the right person information storing means,

and which outputs, when the right person is authenticated, a payment signal to the

medal paying means and

controls payment of a medal from the medal paying means, and

a plurality of medal keeping and paying client apparatus comprising:

medal keeping means for counting and keeping an input medal;

medal paying means for paying a medal if a payment signal is input;

right person information inputting means for inputting right person

peculiar information for identifying a right person such as physical information to

authenticate a right person;

right person information storing means in which the right person

peculiar information for identifying the right person such as the physical

information to authenticate the right person is stored;

a memory for temporarily keeping information which is being

processed, wherein the information comprises the count information of the medal

keeping means; and

a processing section which

authenticates a right person from the right person peculiar

information input from the right person information inputting means and the right

person peculiar information stored in the right person information storing means,

and

when the right person is authenticated, the processing section outputs

a payment signal to the medal paying means, and controls the payment of a

plurality of medals from the medal paying means, wherein each of the processing

sections of the medal keeping and paying server apparatus and each of the plurality

of medal keeping and paying client apparatus include a network interface, and the

processing section of the medal keeping and paying server apparatus is connected

with the operation information storing means of the medal keeping and paying

server apparatus through the network interface thereof, and the processing sections

cooperate to connect between the medal keeping and paying server apparatus and

each of the plurality of medal keeping and paying client apparatus through a

network, thereby connecting the processing section of each of the plurality of the

medal keeping and paying client apparatus with the operation information storing

means of the medal keeping and paying server apparatus through the network

interface of the medal keeping and paying server apparatus and

the processing section of the plurality of the medal keeping and

paying client apparatus is enabled to input at least the count information of the

medal keeping means and the right person authorization information in each of the

plurality of the medal keeping and paying client apparatus to the operation

information storing means of the medal keeping and paying server apparatus

through the network interface to store and renew the information, and is enabled to

access the operation information storing means through the network interface to

output the payment signal based on the count information of at least one medal

stored in the operation information storing means, and

the processing section of the server medal keeping and paying

apparatus is also enabled to input at least the count information of at least the

medal keeping means and right person authorization information in the medal

keeping and paying server apparatus to the operation information storing means of

the medal keeping and paying server apparatus through the network interface to

store and renew the information, and the processing section is enabled to access the

operation information storing means through the network interface to output the

payment signal based on the count information of the at least one medal stored in

the operation information storing means.

2. (Withdrawn)

(Original) A medal keeping and paying system according to claim 1, 3.

wherein

the number of medal keeping and paying apparatus having the operation

information storing means is two.

4. (Withdrawn)

5. (Original) A medal keeping and paying system according to claim 1, wherein

the right person information storing means stores the right person peculiar information, and is an information record card possessed by a right person,

the medal keeping and paying system further comprises information reading means for reading the right person peculiar information from the information record card,

the processing sections processes the right person peculiar information read from the information record card by the information reading means to authenticate the right person.

6. (Withdrawn)

7. (Previously Presented) A medal keeping and paying system according to claim 3, wherein

the right information storing means stores the right person peculiar information, and is an information record card possessed by a right person,

the medal keeping and paying system further comprises information reading means for reading the right person peculiar information from the information record card,

the processing section processes the right person peculiar information read from the information record card by the information reading means to authenticate the right person.

8. (Withdrawn)

9. (Previously Presented) A medal keeping and paying system according to claim 1, further comprising

index information inputting means for inputting index information to read out the right person peculiar information from the right person information storing means, wherein

the processing section processes the right person peculiar information read out by the input index information to authenticate the right person.

- 10. (Withdrawn)
- 11. (Previously Presented) A medal keeping and paying system according to claim 3, further comprising

index information inputting means for inputting index information to read out the right person peculiar information from the right person information storing means, wherein

the processing section processes the right person peculiar information read out by the input index information to authenticate the right person.

12. (Withdrawn)
